A review of significant milestones of each year for the cryptocurrency market: 2017 for ICOs, 2018 for Smart Contracts, 2019 for Stable coins, and 2020 for DeFi. 2021 is the crowning period of NFT.

The non-fungible token space (NFT) has appeared in 2012 but until 2017 it was more known thanks to the launch of the first crypto games on the Ethereum network. The burst of crypto in the beginning of 2020 paved the way for NFT to become the latest investment trend, bolstered by both gaming assets and digital assets. According to a report from NonFungible.com, sales of NFT to more than $2 billion in the first quarter of 2021 – more than 20 times the volume of the previous quarter.

The Decentralized Finance (DeFi) took the world of crypto by storm in 2020, showing extremely high growth numbers for the last seven months in a row. Jumping into the second quarter of 2021, the value of DeFi is continuing to skyrocket – the total value in DeFi projects reached $100 billion, while the figure was around $40 billion in 2019. In spite of rapid growth, DeFi remains an attractive trend with a plenty of room for innovation.
The association between NFT and DeFi initiates great growth potential and new horizon for cryptocurrency. The complex matter of the rapid growth of NFT, after the similar hyper-acceleration of DeFi, acts as contributing factor to create astonishing innovations with enormous promise of democratization, new business models and global markets with global approach, which is driven by the basic premise of decentralization and the basic structures of cryptocurrencies. Although the NFT is described as a unique type of cryptographic Token with some intrinsic value to holders or to the market (art, collectibles), the NFT movement is the resolving power of the DeFi movement, along with the ability to provide platforms and means of transactions for all Tokens.

NFT-Starter (NST) acts as a pioneer creating more consistent, more healthy development environment for the association between the new DeFi and NFT ecosystem. Hence, the goal of NFT-Starter is to act as both a role model and a guide in a firm control of the product-launching progress as well as a bustling cryptocurrency market.

Binance Smart Chain is EVM-compatible, it launched to provide a high-speed, low-cost alternative for exorbitant gas fees of Ethereum tools and Dapps. In addition, BSC is conceived for cross-chain transfers, a Proof of Staked Authority consensus protocol to implement certain scalability. Hence, Binance Smart Chain acts as a contributing factor in a range of cutting-edge protocols designed to bridge the gap between various blockchains, which creates an ideal platform for developers building powerful DApps.
BEP-20 is a token standard as a technical specification for Binance Smart Chain, which creates a flexible format for developers to launch a range of different tokens. Therefore, it allows anyone to deploy fungible digital currencies or tokens functioning similarly to Ethereum’s ERC20 standard on Binance Smart Chain.

Moreover, BEP-20 token transfers is designed with the support of BNB as a mean of transaction for validators to implement their transaction or solve their matters.

BEP-20 represents a token standard like a sudden demand for a smart contract-compatible DeFi platform with low fees, which do not suffer from exorbitant Ethereum gas fees.

Thanks to a low-cost, high-speed substitute for Ethereum and the government backing of one of the largest cryptocurrency exchanges in the world, Binance Smart Chain asserts its strength on the cryptocurrency market. Binance Smart Chain boasts a wide range of DeFi apps and DApps on its chain, followed by the migration of DeFi protocols to Binance Smart Chain.

There is not only for decentralized finance, Binance Smart Chain but also supports the foundation of gaming and gambling DApps on its chain. As a result, the great demand for non-fungible tokens (NFTs) will enable BSC users with the same crypto collectible found on other chains. Hence, thanks to leverage high performance and low fees, BSC is a promising incubator for NFT innovations.
In 2020 we witnessed the DeFi's miraculous growth and jumping in 2021, we have great expectations of NFT which is now the most anticipated trend. The concept behind NFTs is an amazing one, combining Tokens with a single facet such as digital art & music or even real estate.

However, NFT assets have been created on the Ethereum blockchain with high cost. Exorbitant gas fees have nearly posed challenges to the creativity and innovation of new project launches. Moreover, existing projects to lose user engagement - staking, claiming, and normal trades are costing ETH users hundreds in transaction fees. In fact, this could be unable to prevent the development of the NFT, because human beings are constantly advanced to find new solutions and directions for the problems encountered.

NFT-Starter (NST) was originated as a pioneer created in a more favorable, more consistent, more healthy development environment. Our long-term vision for NFT is developing an NFT ecosystem based on Binance Smart Chain. (We seriously consider whether the generation and exchange NFT is emitting a large amount of emissions and consuming plenty of electricity or not). By using Binance Smart Chain, we can slash gas fees to a minimum with more scalability & reliability. Recently, the increasing number of projects, use cases, and applications on the Binance Smart Chain are generated every day because of its benefits and popularity.

NFT-Starter developers believe that community could act as the most important contributor to solve a manifold of the world’s problems. When communities have opportunities to use proper tools, they can come to together and take matters into their own hands more effectively.

That is why we have developed NFT-Starter – an ecosystem could create favorable conditions for the community to participate in management to raise capitals for NFT projects and value NFT assets in a more transparent and more complete manner. It is the NFT-Starter community that will determine which projects to list for fundraising and which NFT assets to contain more value by means of using the community's collective due diligence and DYOR skills.

Through NST-Starter, let us turn community’s power into a filter that filters out clutter and haze overshadowing the enormous potential of this soaring ecosystem, followed by the fact that we can find the next high-quality crypto gems with ease.
NFT-Starter’s mission is to create the NFTs ecosystem's number 1 – top 1 DeFi production in 2021, which opens the door for NFTs innovations by means of available tools, services and features of DeFi real-world solutions thanks to the high level of expertise, financial resources and NFT-Starter community strength.

Our vision is to get the best out of community strength and marketing power needed to fast track the evolution of NFTs’ projects on the path to success. NFT-Starter grants the right for every participant to take complete control and freedom to utilize their valuable assets in a digitalized, secure and accessible way. NFT-Starter team express a desire to take the initiatives for creating ways for a smart investment generation, which brings to the community manifold perks from the potential cryptocurrency market.

NST Token acts as Utility Token secured by the NFT-Starter platform’s native digital cryptography, which creates an assignable representation of functions specified in the code of NFT-Starter platform. NST Token is designed to play an important role in the functioning of the ecosystem and has intention of using solely as the primary tool on the NFT-Starter platform.

NST Token is a contributing factor used as the bridge between participants who interact within ecosystem on the NFT-Starter platform. The purposes of NST Token is to provide convenient and safe method of payment which accepted by the public (or section of the public), means of transaction including payments for goods, services or debts, which creates settlement between participants on the NFT-Starter platform.

NST Token would also facilitate economic incentives for all NST holders, which is of paramount importance in the contribution and maintenance of the ecosystem on the NFT-Starter platform. As a result, there is a win-win system where every participant can reap benefits corresponding to the amount of NST Tokens. In the absence of NST Token, users would not gain incentives to participate in any activities or provide services for the benefits of the whole ecosystem on the NFT-Starter platform. NST Token would also bring many additional rewards to users according to their actual involvement and contributions.

TRENDY FEATURES
The target for NFT-Starter platform is to have it exclusively governed by NFT-Starter community. Therefore, the purpose for NFT-Starter government framework is to create a solid and sustainable environment for development and utility. NST holders have the largest influence in governance such as having voting right for ecosystem initiatives, new functions development, liquidity pool rewards distribution and other applications. Hence, NST holders are those who make their own decisions to steer the future direction of the entire NFT-Starter ecosystem.

In order to have opportunities to participate in governance framework, token holders are required to hold a minimum number of NST tokens to vote and to submit proposals corresponding to the number of tokens they hold. Proposals will be first discussed by NFT-Starter development and management team on the NFT-Starter governance platform. After studying the feasibility of technology and cryptocurrency market, there will be an on-chain vote. Every winning proposal is carried out on the NFT-Starter platform, which promotes democracy among NFT-Starter community.

When any new project wants to be promoted and sold on NFT-Starter must meet full required standards in terms of the quality. Moreover, that project must either purchase at least 200 million NST and lock in 1 year or purchase at least 100 million in which 50% lock and 50% burn (TXID of buying and burning will be announced on the official channel of NFT-Starter). In the future, this amount will be changeable, which depends on voting decisions of the community.

If partners breach the commitments in terms of the quality, NST tokens shown in above item will be distributed to NST holders participating in that project.

Members buying new Tokens and holding NST during the Token sale will be awarded with a certain amount.

Members holding at least 2,000,000 NST Tokens can participate in the future IDOs and be entitled to send BNB at a fixed price to invest on NFT-Starter platform.

In addition, a several of certain projects would still enable NFT-Starter community to join in IDO participation without holding 2,000,000 NST Tokens. However, those who hold with less than the required amount of NST tokens will not have chance to participate in insurance pools. In contrast, those who holding at least 2,000,000 NST Tokens will be provided with insurance coverage and have the opportunity to define their insurance terms of their own policies.
**Phase 1:**

NFT-Starter acts as an incubator to get the best out of community strength and marketing power to fast track the evolution of NFT projects on the path to success. In Phase 1, we build a platform for partner NFT projects to pay attention to community as well as providing all information to get the community to know more about them. At the same time, we directly organize Airdrop programs of partners' Token for NST holders.

**Phase 2:**

NFT projects will be directly open for sale on NFT-Starter platform. NFT-Starter grants the right for every participant to take complete control and freedom to participate in the future IDOs in a digitalized, secure, and accessible way.

The Phase 2 buying window opens at the same time for all members until all tokens are sold and the IDO is concluded. NFT-Starter always focuses on building a fair system for the community and gives them the proper incentives and rewards to accumulate and hold tokens as well as supporting each and every NFT project launched. NFT-Starter is the follow-up development of a blockchain launchpad that addresses the fundamental flaws causing existing launchers. This platform brings multiple benefits to all token holders and enables fair launch, granting traders of all types the opportunity to invest in the best upcoming NFT projects.

NFT-Starter partners can apply for new projects on NFT-Starter. Upon application submission, your presale smart contract is generated according to your rules. Community members holding at least 10,000,000 NST Tokens have the right to approve or decline projects on NFT-Starter. Projects which receive more Yes votes than No votes, and receive at least 10% of the Total Supply of NST Tokens as Yes votes will be approved to start their sale. Once the voting time has ended, the Presale will be started.
Community members holding at least 2,000,000 NST tokens can participate in future IDOs and be entitled to send BNB at a fixed price to invest on NFTStarter.

When the sale ends, if softcap is reached, project is considered successful and no funds can be made.

BNB in the profits from Token sale will be deducted a part to buy back NST Tokens and burning.

Anyone can create and exchange their NFTs on the NFT-Starter marketplace.

Every day, you can get 1 Star Rating for every 10,000,000 NST tokens holding.

You can become “Rating Specialist” & earn BNB by giving the Star Rating for NFT, which you find amazing, unique and highly appreciate its value (music value, artistic value, real estate value,…).

The more Rating NFT gets, the more it can appear on the top of the trading market, followed by the fact that it can be sold at a higher price.

Based on Rating System, NFTs are ranked as follows:

- White frame for NORMAL NFT (less than 100 Stars)
- Green frame for GOOD NFT (100 Stars - 199 Stars)
- Blue frame for GREAT NFT (200 Stars - 999 Stars)
- Golden frame for EPIC NFT (1600 Stars - 3200 Stars)
- Diamond frame for LEGENDARY NFT (more than 3200 Stars)

For each successful transaction of an NFT, the buyer receives Fame score = 10x(amount of BNB coin traded), the seller receives Fame score = 5x(number of BNB coins traded), and each member awarded a Rating NFT will also receive Fame = (number of stars Rating) x (number of BNB coins to be traded). There will be a Hall of Fame that honors the top ranks.
We are launching a Farming (Liquidity Pool) program for community to incentivize participation in the daily token pools. On the farm, you can deposit LP tokens from NFT-Starter partners, locking them up in a process that rewards you with NST.

Farming program will distribute a fixed daily amount of NST Tokens. All liquidity providers will get NST from this fixed amount on a prorated basis.

NFT-Starter will develop and evolve without cease to follow and update trendy features in the future, which acts as a contributing factor for NST coin to ensure stability.

NST holders will be granted powers to offer more trendy features for NFT-Starter platform.
Members holding at least 2,000,000 NST tokens can participate in future IDOs on NFTStarter.

Members holding at least 10,000,000 NST tokens can vote to approve or deny projects on NFTStarter.

Members holding at least 20,000,000 NST tokens every day can get 1 Rating star for each 10,000,000 NST tokens holding.

NFT marketplace would create more favorable conditions for the community with more interaction, more scalability, more benefits, especially for buyers, sellers and rating specialists.

**ROADMAP**

**QUARTER 1-2021**
- Idea preparation and team building
- Outline design
- Smart contract
- Development
- Seek potential partners

**April**
- Fix bug & upgrade outline
- Listing on PancakeSwap
- 1st Marketing campaign
- Listing on CoinGecko

**June**
- Listing on Coinmarketcap
- NST Farm
- NST Governance
- NST Insurance fund

**QUARTER 2-2021**
- Smart contract development
- Seek potential partners
- Listing on Coingecko

**May**
- Release new website
- Release full white paper
- NFT Marketplace beta version
- Liquidity seeds
- Audit smart contract
- Smart contract security compliance
- Listing on CoinList & Hotbit
- IDO Launchpad

**QUARTER 3-2021**
- Audit smart contract
- NFT Marketplace beta version
- Listing on Coingecko
- Listing on Coinmarketcap
- NST Farm
- NST Governance
- NST Insurance fund

**July**
- NST Pools
- NST lottery - the pioneer decentralized lottery project in Binance Smart Chain.
- NFT Marketplace
- NFT Market Testnet
- NFT Market Launch
- Listing on CoinList & Hotbit

**QUARTER 4-2021**
- Listing on Kucoin & BNB
- NFT Analytics Platform
- NFT Ecosystem Testnet
Please read the entire of this “Notice and disclaimers” section carefully. The NFT-Starter Whitepaper has been published and issued by NFT-Starter team for information purposes only. The Whitepaper is a document for working and is subject to change and correction. Before engaging in any activity in connection among NFT-Starter, partners and the users/purchasers, there must be a binding arbitration on three parties as a source of control and discipline. This Whitepaper is used to provide potential purchasers and partners with the information of NFT-Starter’s ecosystem to permit partners to promote projects and purchasers to make their own decisions on the evolution of NFT-Starter. Neither any of the project team members or project to develop the NFT-Starter platform in any way whatever, nor any service providers shall be responsible for any kind of direct or indirect damage/loss whatever which you may suffer in connection with accessing this Whitepaper, the Website at https://nft-starter.com/ or any other websites or materials published by NFT-Starter team.

The Whitepaper and the Website are originated with the intention of general informational purposes only and do not comprise an offer or invitation, investment advice, or any other sale or purchase of shares, securities, or any of the assets (whether digital or otherwise). The information herein may not be comprehensive and does not imply any element of a contractual relationship. There does not have assurance for the precision or comprehensiveness of such information, followed by the fact that there is also no representatives, warranty or undertaking to be provided as to the precision or comprehensiveness of such information. It also should not be used in the Moreover, you acknowledge that the situation may change, this Whitepaper or the Website may be out of date as a result; and only NFT-Starter representatives is under an obligation to update or correct this document in connection therewith.

1. NATURE OF WHITEPAPER

The Whitepaper and the Website are originated with the intention of general informational purposes only and do not comprise an offer or invitation, investment advice, or any other sale or purchase of shares, securities, or any of the assets (whether digital or otherwise). The information herein may not be comprehensive and does not imply any element of a contractual relationship. There does not have assurance for the precision or comprehensiveness of such information, followed by the fact that there is also no representatives, warranty or undertaking to be provided as to the precision or comprehensiveness of such information. It also should not be used in the Moreover, you acknowledge that the situation may change, this Whitepaper or the Website may be out of date as a result; and only NFT-Starter representatives is under an obligation to update or correct this document in connection therewith.

2. TOKEN DOCUMENTATION

The Whitepaper or the Website does not constitute any offer for NST Token sale or any contract and investment decision. The Whitepaper and the Website are not liable as a promise, representation or undertaking as the future performance of the NFT-Starter platform.
3. INFORMATIONAL PURPOSES ONLY

The NFT-Starter is still under development and its design concepts, and other technical details and parameters can be updated and changed from time to time. Although the information set out in the Whitepaper and the Website is illustrating the development goals for NFT-Starter platform in the future, the Whitepaper and the Website are not absolutely complete and comprehensive. In particular, NFT-Starter roadmap in the Whitepaper is being shared so as to demonstrate upcoming direction of NFT-Starter, does not comprise any binding commitment. Please use Whitepaper as a reference source, do not depend on this information for your own decision whether to participate in the Token distribution or not because the development plan, launching timeline of any products, features or functions is subject to change. Moreover, the NFT-Starter team has no ability and obligation to NST holders for update on the Whitepaper or the Website beyond what is provide herein and the Whitepaper or the Website can be replaced according to the progress of the project.

4. REGULATORY APPROVAL AND ENFORCEMENT ACTIONS

- There is no regulatory authority and assurance of any information contained in the Whitepaper or the Website. No assurance of publication, distribution or spreading of the Whitepaper or the Website will be taken under the laws, regulatory requirements or rules.

- Regulatory issues and distributed ledger technology are ambiguous or unstable in many jurisdictions. It is a task of challenge to predict innovations in the regulation for cryptocurrencies in the future. Moreover, regulatory actions can exert negative impacts on NFT-Starter platform in various ways. After consulting with numerous legal advisors and continuously analyzing the development and legal structure of cryptocurrencies, there is a precautious method applied to the sale of NST. Hence, the strategy of NST sale can be adjusted continuously in order to limit legal-related risks as much as possible.
5. REFERENCES TO PLATFORMS
The platform names or logo does not imply any objection or any indorsement by any third party so references herein are for descriptive purposes only.

6. ENGLISH LANGUAGE
The Whitepaper or the Website may be translated into many languages for references purposes only but in event of dispute between the English version and the translated version, the English version shall prevail. You confirm that you have read and understood the English version of the Whitepaper and the Website.

7. DISCLAIMERS
NFT-Starter team makes every endeavor to provide reliable, complete and accurate information. However, we do not guarantee the accuracy and completeness of the information. As a result, the information shall not be regarded as advice, legal proof or evidence, whether explicit or implied. Therefore, NFT-Starter hereby expressly disclaims its liability and decline to be liable for the following liabilities:

- Any purchasers in violation of anti-money laundering, counter-terrorism financing or other regulatory requirements that are settled in any jurisdiction
- Any purchasers do not conform to any representation, warranty, obligation or commitments under this Whitepaper or the Website or loss, divulgence or destruction of the private key to his/her wallet for cryptocurrency, followed by the failure of paying and withdrawing NST
- Termination of the NST crowd sale, trading or speculation of NST for any reason
- The risk of NFT-Starter development will be not executed or implemented as the initial plan for a variety of reasons, including but not limited to a decline in NST price, unforeseen technical difficulties, which renders the failure to deliver NST products or termination of NFT-Starter development
Failure to meet published schedules because of delay or rescheduling of the NFT-Starter development

Any malfunction, breakdown, collapse, rollback of the original public chain that NFT-Starter relies on
Termination of the NST crowd sale, trading or speculation of NST for any reason

Any errors including but not limited to defaults, breach, infringement, breakdown, collapse, interruption, fraud, mishandling, misconduct, service suspension, bankruptcy, insolvency, dissolution of any third-party platform or exchange for NST.

There is a risk including but not limited to malware attacks, supply chain attacks, and brutal attacks from hackers or other malicious groups or organizations may attempt to interfere with NFT-Starter platform.
